Received and published: 11 December 2011

Dear authors,

we have received the reviewer's comments. As you will see, both were quite positive and recommend publication of the ms after revisions have been made. I am sure that you will be able to address the comments and queries.

Please find below a few additional technical comments

page 3092 L15-16: check syntax / sentence
3094 L 5: probably <half millennium>
3096 L25 Probably CCSM3 (?)
3100 L7: located in (?)
3101 L23: check syntax : with a (?)
3103 Chapter 5: clarify whether you speak about TT or PP (e.g. L21 : JJA precipitation reconstruction ?)
3005 L26 southern South-American
3106: These findings are supported . . . This is not a surprise (but rather a circular argument) because these data sets were the basis for the Neukom et al reconstruction! These are by no means independent!
3107 L27 affected ? Delete one <also>
3109 L 12: which were simulated ?
3109 L17: external forcing?
3109 L 23: certain range .. maybe replace with <under the range of external forcing the Earth has experienced during the last 500 years> or so.
3110 L 26: However, as noted previously, . . .
Table 3: 1st row should probably read SA1 – SA4
Fig 6 Caption: should probably be precipitation instead of temperature (copy-paste from Fig 5) Fig 7: yes, that can be left out (see Rev 2)
I am looking forward to the revised version of your manuscript.
Kind regards
Martin
