Dear Editor and Reviewers,

The corrected version of all figures and tables are uploaded here in supplements. Please check it out.

Regards Akil Hossain

Please also note the supplement to this comment: https://www.clim-past-discuss.net/cp-2018-9/cp-2018-9-AC1-supplement.pdf

Figure 3: Global SST anomalies of the annual mean LGM LIS experiment output, and temperature trends based on planktonic foraminifera, Mg/Ca, dinoflagellates, U\(^{237}\)Th, dinocysts and radiolarian reconstructions of MARGO project. Background color fill: simulated annual mean SST changes between the Tarasov_LIS and PI. The circles localize the three different proxy records, respectively.

Figure 5: (a) The circles localize the foraminifera, MgCa, diatoms, and U\(^{237}\)Th records and the color fill of the circles show the different depth (m) mean in which the reconstruction agrees best with model. (b) Background color fill: simulated global pattern of annual mean sea surface temperature changes between the LGM and PI climate. Colors fill of the circles show the temperature change recorded by corresponding depth mean shown in (a) at the sample locations.
