Dear Andrei Briceag, Thank you for reading the discussion paper and for posting a comment. However, the discussion phase is the opportunity for the scientific community to propose and discuss additional scientific comments to the paper for the authors to consider and submit a reply to. As you have not provided points for discussion here I will not expect the authors to make any reply, but nor will I include your comments as part of the evaluation of the manuscript. Best wishes, Erin McClymont (Editor)
