The paper "Lack of marine entry into Marmara and Black Sea-lakes indicate low relative sea level during MIS 3 in the northeastern Mediterranean" presents new and valuable data on a subject that still raises a lot of questions. In my opinion the information that you present in this study are of great importance to our understanding of paleoclimate and paleoceanographic conditions in the restricted Black Sea and Marmara Sea. Keep up the good work and I wait the next paper, detailing the paleo-connectivity and outflow of Black and Marmara Seas.
